Now Even Your Cat Will Come When You Call, With The Cat Caller™

The Cat Caller system is covered by U.S. and foreign patents pending, including U.S. Pat. Appl. 11/838,244; Canadian Pat. Appl. 2,570,073; European Pat. Appl. 07864412.7; and Hong Kong Pat. Appl.

Instructions:

Print name and address on label. Place label on back side of receiver. Unscrew receiver and remove the pull tab sides of the buckle. Insert battery cover inside collar loop and reassemble. Place collar back on your pet. Press and hold the button on the Transmitter Key Chain that corresponds with the color of your pet's receiver. Hold the button down until the receiver beeps and flashes. Feed or give your pet a treat each time you activate the beeper to train him to associate the sound with a reward.

Ideal for locating your favorite lost pet in your home, garage, yard or neighborhood. The wireless transmitter works through walls, closets, under beds and all those places they like to hide. Each color button calls color matching receiver individually. Red "ALL CALL" button calls all receivers at once.

Battery Replacement:

Remove the back cover of the receiver. Insert screwdriver into back slot and carefully remove the back cover. With screwdriver slide out the old battery holder and replace as shown. Receiver requires one Lithium CR2032 3V battery. Be sure to insert the battery so the positive (+) side faces up. Snap the receiver back together.

Do not mix old and new batteries. Do not mix alkaline, standard (carbon-zinc), or rechargeable (nickel-cadmium) batteries. Remove batteries when not in use or discharged.
